

## ABSTRACT OF THE DISCLOSURE

A side mirror cover comprises a mirror plate covering member and a side mirror lamp. The lamp comprises a lamp housing having a plurality of light emitting elements and a translucent lamp cover for covering the light emitting elements. A through hole comprises first and second through holes formed side by side along the width of the vehicle. A lamp housing comprises first and second housing sections. The lamp cover comprises first and second cover sections. A plurality of light emitting elements comprises a first LED for illuminating the front of the vehicle and a second LED for illuminating the side of the vehicle. The inner surface of the first cover section has concavities and convexities so as to reflect light. Two types of side mirror lamps are clearly differentiated so that a function as a direction indicator lamp and a function as a position lamp or a daytime lamp are provided.
